Project Name	Measuring the Pulse of Prosperity: An Index of Economic Freedom Analysis
Maximum Marks	5 Marks

Story 1

Observations:

1. Unemployment & Economic Freedom

Countries with high unemployment (like South Africa and Syria) tend to have lower economic freedom scores, showing a negative relationship between joblessness and economic health.

2. Population vs. Economic Index

Large population doesn't guarantee high economic freedom. For example, India and China have massive populations but rank lower due to regulatory or policy limitations.

3. Regional Insights

Top-ranking countries are mainly in North America, Europe, and Oceania. Struggling economies are concentrated in parts of Africa, Asia, and the Middle East.

4. GDP and Monetary Freedom

Nations with high GDP per capita (e.g., Norway, Australia) also show strong monetary freedom, indicating well-managed economies.

5. GDP Growth Trends

Some countries show strong or stable growth (e.g., Uzbekistan), while others face negative or volatile growth (e.g., Venezuela), reflecting political and economic instability.

6. Inflation Issues

Countries like Venezuela face hyperinflation, which severely impacts economic stability and investor confidence.
