

Dashboard Design

Date	23 March 2025
Team ID	LTVIP2025TMID25141
Project Name	Measuring the Pulse of Prosperity: An Index of Economic Freedom Analysis
Maximum Marks	5 Marks

Dashboard:

Potential Outcome 1:

Key Insight:

Top-ranking countries in economic freedom are mainly located in North America, Europe, and the Asia-Pacific, highlighting a regional concentration of prosperity and strong governance.

Potential Outcome 2:

Key Insight:

Countries with lower economic freedom rankings tend to experience higher inflation and unemployment rates, highlighting how weak economic structures and policies can negatively impact economic stability.

Potential Outcome 3:

Key Insight:

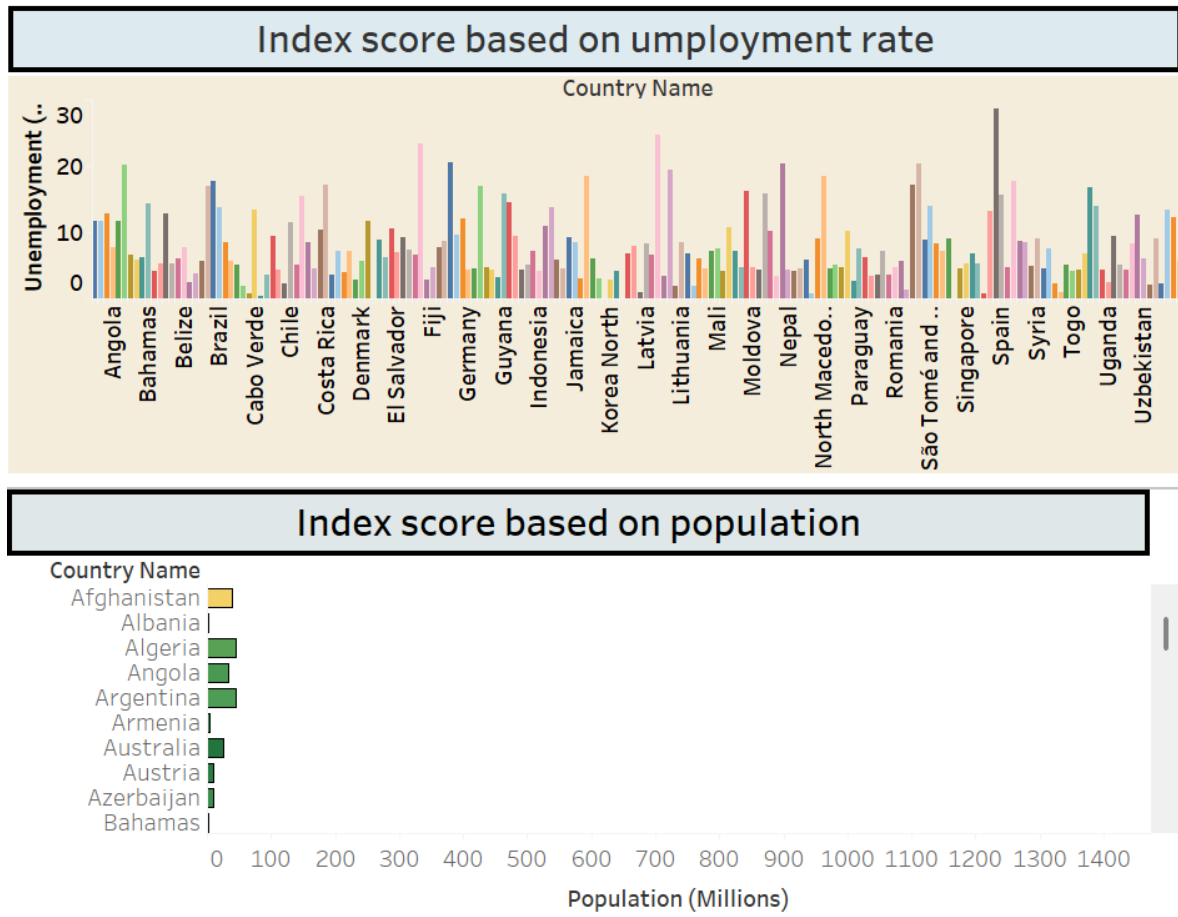

Countries with higher GDP per capita generally exhibit stronger monetary freedom, suggesting that sound monetary policies contribute to national wealth. However, GDP growth rates vary widely, indicating that short-term economic performance doesn't always reflect long-term prosperity.

Potential Outcome 4:

Key Insight:

While most countries maintain moderate 5-year GDP growth rates, extreme inflation levels—such as in Venezuela, Zimbabwe, and Sudan—can severely destabilize economies. High inflation correlates with economic uncertainty, eroding purchasing power and deterring investment, ultimately affecting sustained growth.

Potential Outcome 5:

Key Insight:

Higher unemployment rates are generally associated with lower economic freedom scores. However, population size does not show a direct correlation with the index, indicating that economic prosperity is influenced more by policy and governance than by population scale.
